

KBT AI Transformation Roadmap

Boardroom Presentation for Management

Executive Summary

Artificial Intelligence can help Kalra Buildtech improve operational efficiency, reduce manual effort, enhance document accuracy, accelerate project execution, and provide management with real-time business insights. The objective is to build a scalable digital ecosystem that supports future growth.

Current Challenges

- Manual reporting and follow-ups
- Scattered project information
- Time-consuming document reviews
- Limited real-time management visibility
- Repetitive administrative work

AI Opportunities

- AI Project Assistant
- Document Verification & Comparison
- Tender & Government Document Analysis
- Automated DPR, MOM, and PDF Generation
- Vendor & Client Follow-up Automation
- Knowledge Management Assistant

Phase 1 (0-3 Months)

- Centralized Data Platform
- Management Dashboard
- Task Management System
- Automated Reporting
- Document Automation

Phase 2 (3-6 Months)

- CRM System
- Vendor Management System
- HRMS
- Mobile Field Application
- Project Monitoring Dashboard

Phase 3 (6-12 Months)

- KBT AI Assistant
- Predictive Analytics
- AI Agents by Department
- Executive Decision Dashboard
- ERP-Style Integrated Platform

Expected Business Benefits

- Reduce manual effort by 40-60%

- Improve document accuracy
- Faster project reporting
- Improved management visibility
- Better decision-making
- Scalable business operations

Role of Internal Development Team

- Build custom systems tailored to KBT
- Automate workflows using AI
- Integrate project, finance, HR, and CRM data
- Develop internal AI assistants
- Continuously improve business processes

Management Recommendation

Focus initially on centralized data management, reporting automation, dashboards, and task management. Once data is organized, implement AI assistants and department-specific AI agents to maximize business value and long-term scalability.
